Gravity Fed Eyewash

MODEL 01104055
Gravity Fed Eyewash with
Transport Cart & Waste
Receptacle

Encon Safety Products presents its gravity fed eyewash station (Model 01104050). This self-contained station requires only 14 gallons of flushing fluid to meet the ANSI Z358.1-1998 standard. The Encon eyewash weighs just 138 lbs. full and is the sleekest profile (22.5" x 28.5" x 5.25") self-contained product available — making the most of application space. An 8 fl. oz. bottle of Encon's Hydrosep® is included as the water treatment additive to help prevent bacterial growth for up to 120 days.

Model 01104055 includes transport cart and wastewater receptacle. The addition of the Transport cart and wastewater-collecting receptacle makes this equipment easily handled, placed or serviced by a single worker. The cart is complete with large rear wheels for navigating rough surfaces and the lockable front wheels to ensure stability of the unit when positioned for use. The optional drain kit (01110729) allows the discharged fluid to be channeled directly to a receptacle or away from the standing area of a potential user.

For installation where freeze resistance is an issue, consider the heated and insulated model 01104070, suitable for installation into electrically classified facilities (Cl. 1, Div. 2, Gp. B, C, & D areas), for connection to 120VAC electrical power.
