Freeze-Protected Showers

Encon® Freeze-Protected shower heads resist freezing by maintaining an internal water temperature above 50° F. Internal water temperatures are maintained with a self-limiting thermostatically controlled heating cable on Therma-Flow® showerheads and a radiant heater or heating cable on Therma-Flow Plus® products.

Combination Eyewash/Facewash Showers

Encon® combination shower and eyewash emergency fixtures provide the user with a complete full body rinsing and orbital area coverage in a single station. Key features include self-regulating shower heads and eyewash spray heads with full dispersion flow patterns. Encon's unique design ensures that the liquid flow is non-damaging, covering the body and facial regions using different hydraulic pressures from the water supply source.

Self-Contained and Portable

For areas where potable water is not available, Encon® self-contained and portable stations with 15-minute supply meet ANSI Z358.1 for eyewash requirements. Encon® offers several options including pressurized, gravity, and sealed water cartridge eyewashes.

Storage Solutions

- Chemical resistant ABS thermoformed plastic construction
- Corrosion resistant external components
- Low friction, high strength hinges
